1. **Role:** **Co-Investigator**
Title: Effect of Increased Lean Mass on Postural Blood Pressure in Older Adults with Low Lean Mass
PI: Melissa Benton
Source: NIH R21
Purpose: Falls are a serious and costly problem in older adults, and are linked to hydration status and orthostatic hypotension. Current fall prevention guidelines for older adults with orthostatic (postural) hypotension recommend withdrawal of anti-hypertension medications, placing them at risk for long-term consequences of hypertension. If successful, this study will provide an alternate non-pharmacologic management strategy that allows older adults to maintain medication therapy for hypertension and cardiovascular disease.
